FOR IMMEDIATE RELEASE

Key Electronics Builds First Clean Room and Receives ISO 7 Class 10,000 Clean Room Approval

Jeffersonville, Indiana (December 23, 2009) – Jeffersonville, Indiana-based Key Electronics, Inc., a provider of electronics manufacturing services, received certification from Lewis Testing Services, Inc. of Indianapolis, Indiana for a Class 10,000 Clean Room on December 21, 2009.

The addition of the clean room gives Key Electronics an advantage in that Key is one of the only electronics manufacturers in the region with clean room capabilities. The ISO Class 7 room allows Key to produce medical devices that require clean room manufacturing standards.

Tom Hardy, President of Key Electronics, stated, "I am very excited about the opportunity to expand our company with new and existing customers seeking a specialized clean manufacturing process. Our clean room was built to directly support medical device manufacturing requirements for current customers of our joint venture, GenKey Group, LLC."

The addition of this clean room marks a milestone for electronic medical device manufacturing at Key. Medical device manufacturing traditionally has been concentrated in certain areas such as Boston, Minneapolis, or California. Now, with new capabilities in Southern Indiana, Key can close the gap in meeting medical device manufacturing needs right here in the Midwest Region.

Key Electronics is an ISO 9001:2008 certified electronics manufacturer specializing in custom assemblies. Capabilities include advanced circuit board manufacturing and electronic product assembly services. The company has been recognized as having the *Overall Highest Customer Rating* for four consecutive years at the Circuits Assembly Magazine Service Excellence Awards (in the less than \$100 million service provider category).

GenKey Group, LLC is a joint venture of Genesis Plastics & Engineering, LLC and Key Electronics, Inc. GenKey Group specializes in total product management from concept and design to manufacturing and logistics. GenKey focuses on medical and industrial market applications requiring sophisticated electronic and electromechanical manufacturing.
